Nvoice for Microsoft Teams

Let your teams fly higher.

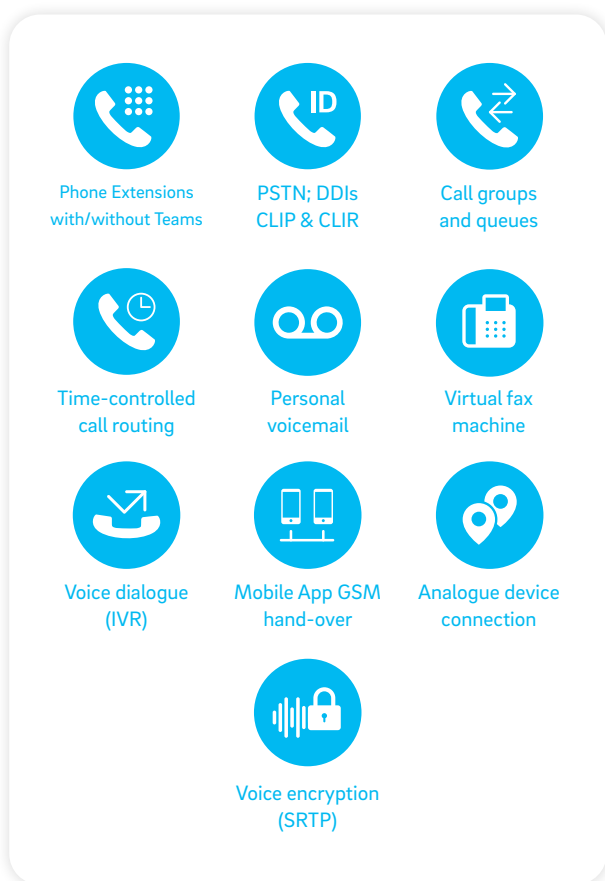

The new freedom in business communications.

nfon.com

We all want to do more. Now you can.

Today's smart businesses are supporting more mobile ways of working, with employees dispersed across not just the country, but often the world. And wherever your people happen to be, they need to work together. Which means being able to access whoever, whenever, wherever, via their preferred platforms. And it's not just your employees who need always on, always accessible communications. Your customers do too, so they can contact you at a time and in the way that suits them best.

If you use Office 365, you're most likely using Microsoft Teams as your workspace solution. It brings your business together easily and enables natural teamworking. But what if you could do even more through Microsoft Teams?

1. More productive collaboration

Wouldn't you like to use Microsoft Teams as your single solution for enterprise-quality business communications?

Although you have call functionality through Microsoft Phone System, telephony is not at the core of Microsoft Teams. If you're looking for enterprise-quality voice functionality for all your business communications, you'll need a telephony solution to run alongside it.

Nvoice for Microsoft Teams uses Microsoft's direct routing solution to enable PSTN services from within Microsoft Teams. Your people get a true enterprise voice solution – with a host of intelligent telephony features – within the familiar Microsoft environment, accessible from any location and any device. It means better collaboration and improved productivity.

2. More cost efficiencies

Wouldn't you like a flexible, unified communications solution that's more cost-efficient?

Microsoft Teams already brings you the benefits of cloud communications, but now you can gain even greater cost efficiencies – especially if you're currently paying for phone lines and hardware.

Just like Office 365, Nvoice for Microsoft Teams is a subscription-based service. Because it's a cloud telephony solution, your people can access enterprise-class telephony features from their mobile device or PC. No longer any need for desk phones. A reduction in admin costs. You can even have a hybrid environment, where some users utilise Microsoft Teams and others utilise NFON's Cloudya telephone system. Whatever suits, you only pay for what you need.

3. More certainty

Wouldn't you like the peace of mind of built-in business continuity?

Nvoice for Microsoft Teams gives you the reassurance of a reliable cloud telephony solution with automatic failover to keep your comms up and running.

Any issues with Microsoft Phone System or Microsoft Teams, simply fail over to NFON's best ever cloud telephone system, Cloudya. It's built on fully redundant architecture that includes highly secure, geo-redundant EU data centres.
